Author(s)

Powell–J, Clarke–A.

Abstract

Qualitative research exploring the information needs and information– seeking behaviour of mental health service users. 4 main themes were identified: equating lack of information from health practitioners with lack of respect; undertaking research and the challenge to professionals of patients' self–learning; information–seeking inhibited by stigma and the benefits of other people's experiences. 22 refs.

Abstract

Research to replicate a 1998 study in the USA which examined the educational needs of psychiatric inpatients compared with nurses' perceptions of those needs, using a modified assessment questionnaire. The discrepancies between the patients' and nurses' viewpoints, and their implications for patient care, are discussed. 13 refs.

Abstract

Research with patients attached to a community mental health team and members of mental health user groups to investigate their desire for information on their illness and treatment and opportunities to participate in decisions regarding their care. The Autonomy Preference Index was adapted for use with psychiatric patients, with scales rating information-seeking and decision-making preferences. 14 refs.
